

AgCam[®]

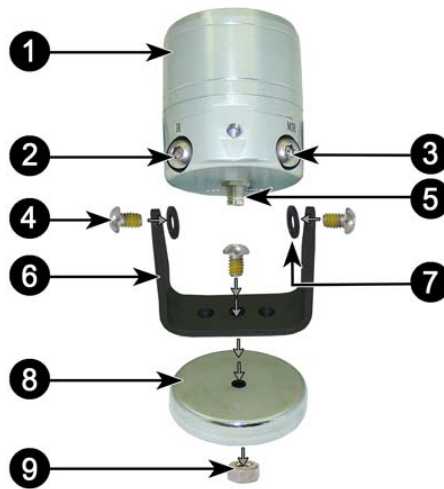

PRODUCT UPDATE

FOLLOW UP PRODUCT UPDATE – AgCam Camera

We have completed our changes to the AgCam, making it better than ever. The features we have added are:

- 1) Removable camera tail
- 2) Built in reverse feature
- 3) Built in ON/OFF for IR lights
- 4) More durable mounting bracket
- 5) All new camera board, with enhanced color, brightness, and varying light condition capabilities

- 1) Camera Body
- 2) IR Function Plug
- 3) MIR Fct. Plug
- 4) Retaining Screw (x3)
- 5) Camera tail input
- 6) Camera bracket
- 7) Fiber Washer (x2)
- 8) Magnet
- 9) Magnet Nut

Function Plugs

Function plugs are a new feature of the AgCam. There are two on the bottom of each camera near the camera tail. They will look like two additional screws at a slight angle recessed into the camera body. The function plugs utilize a polarized magnet to change camera functionality.

- 1) **IR ON/OFF.** This function plug requires a magnet to allow for the IR LED's to function in low light conditions. If you remove the polarized magnet, the IR LED's will NOT come on.
- 2) **MIR/FOR.** This function requires a magnet to mirror/reverse the camera image to allow for use of the camera as a rear viewing device. **Standard cameras WILL include a MIR magnet.**

On our prior announcement the cameras were not including the MIR magnet, we have since decided to include this option standard.

Replaceable Camera Tail

All AgCam's will now include a fully replaceable 3' camera tail

Replacement tails will be available for purchase from your AgCam dealer, P/N: DMAC-CT
